## Customer Reviews

Calling all NASA fans! We had this book handy the day the International Space Station was in the news... one of over 150 titles in the "Let's Read-and-Find-Out Science" series that we own and use constantly! Begun in the 1960s, this series is just perfect when you want to explore a specific topic. Books about the different phases of the moon, the ways of ants, ladybugs, gravity, your skeleton.... all kinds of timeless books with timeless information presented in a living way! But what about the books about rockets and satellites? Boy, are they outdated! That is why I was so delighted with this great new title. Generous oversized format with LOTS of detail.

I bought this for my space-loving 3-year-old. I kept talking to her about the ISS and it occurred to me

she didn't have a good idea of what a space station was. The book helped remedy the situation a bit, but unfortunately it's incredibly outdated. I hadn't noticed the publishing date when I bought it.

Bought this for my granddaughter because she likes science and is interested in the ISS. Though she is only 7, she reads on a fourth grade level. The book was easy for her to read and had good pictures and explanations. The price was good too.

I, already grown-up, have learned a lot about ISS through this book. Maybe we don't have informative book for young persons like this in Japan. All the students who I showed it to were interested in it very much.

My 4 year old loves anything to do with space. We have several of the books in this series and are happy with them all. This book covers many aspects of the International Space station from the beginning to some future goals. It talks about the parts of the station and some of the activities that the astronauts complete. I would recommend this book for any child who is interested in space exploration.
