# What Makes Day And Night (Let's-Read-and-Find-Out Science 2)

## Synopsis

If you lived on the moon, you would have two straight weeks of daylight and then two weeks of night! On earth, we have both day and night in just twenty-four hours, thanks to the quick rotation of our planet. Now rebranded with a new cover look, this classic picture book uses simple, fun diagrams and a guided experiment to explain what makes day and night. This book also includes a find out more section with additional activities to track nocturnal animals and to compare different times of day around the world. This picture book is written by children's book veteran and former Chairman of the American Museum of Natural History's Hayden Planetarium Franklyn M. Branley and features illustrations from Pura Belpré Award Honoree Arthur Dorros. Both text and artwork were expert-vetted for accuracy. This is a Level 2 Let's-Read-and-Find-Out, which means the book explores more challenging concepts perfect for children in the primary grades and supports the Common Core Learning Standards and Next Generation Science Standards. Let's-Read-and-Find-Out is the winner of the American Association for the Advancement of Science/Subaru Science Books & Films Prize for Outstanding Science Series.

## Book Information

Series: Let's-Read-and-Find-Out Science 2

Paperback: 32 pages

Publisher: HarperCollins; Revised edition (August 4, 2015)

Language: English

ISBN-10: 0062381970

ISBN-13: 978-0062381972

Product Dimensions: 10 x 8 inches

Shipping Weight: 4.8 ounces (View shipping rates and policies)

Average Customer Review: 4.8 out of 5 stars [See all reviews](#) (34 customer reviews)

Best Sellers Rank: #57,919 in Books (See Top 100 in Books) [#30 in Books > Children's Books > Education & Reference > Science Studies > Physics](#) [#41 in Books > Children's Books > Education & Reference > Science Studies > Astronomy & Space > Astronomy](#) [#44 in Books > Children's Books > Education & Reference > Science Studies > Earth Sciences](#)

Age Range: 4 - 8 years

Grade Level: Preschool - 3

## Customer Reviews

If your child is interested in science, they will enjoy this book. It combines colorful drawings with

actual photographs to explain the earth's rotation in a simple, understandable way. It is also a part of the Harcourt reading series for second grade, and a wonderful addition to your home library.

My five-year-old grandson likes this book and my two-year old granddaughter looks along. Answers some of his gazillion questions in a manageable way.

The concept of day and night is discussed in grades 2 and 3. This book is a great supplemental text to help increase children's understanding of this concept. Great text and pictures.

While I agree about the clarity and coverage cited by the other reviewers, I take issue with the book's age recommendation of "5 and over". My grandson is 7 and finds this book much too basic. It was still nice, but I think the age recommendation should be 4-6 in my opinion.

Reason for Reading: Ds read aloud to me as his non-fiction reader. This book is still in print but has been completely revised and is not the same as the old edition we have here. A simple, easy-to-read introduction to the earth's shape and how it revolves to create night and day, sunsets and sunrises. An experiment with a lamp is used to further illustrate the process. This book was fairly easy for ds to read and gave him a chance to practice reading using a conversational voice. He also knew the information and it caused him to initiate dialogue to expand upon the basic observations and impart his own knowledge. I love this series of books; they are excellent easy readers in the science field and Branley is a good, interesting writer of non-fiction material. Branley was the originator of the series.

I am a homeschooling mother of two and constantly looking for educational material. At the time I purchased "What makes Day and Night" my daughter was in grade 2 and I needed a book with good information, high quality illustrations and photo's and also a book that she could enjoy by herself. I came to love the "Let's read and find out Science" books, they coincide well with the school curriculum and they are much more fun than prescribed school books. "What Makes Day and Night" is no exception, we read the book over and over, it never fails to impress and amaze. Needless to say it is not the only "Let's read and find out Science" book in our library.

This was a bit over the head of my three year old, but he's been asking about night and day, so we needed something. Despite being for a little bit older crowd, he was pretty interested in it, and sat

through the whole book. We talked about the pictures of the earth, how it spins, etc. I think at least some of the ideas rubbed off on him. Great book, looking forward to reading more of them from the series!

I bought this book for my nephew. He loves it! It gives enough information that the child learns new things but not so much that he can't understand. He's four and he's asking lots of questions. We've actually purchased a number of books from the "Let's read and find out Science 2" series and they all provide lots of information. His mom says that she even learns new things from them. A great value and an asset to any child's library.
