Writing SAP ABAP/4 Programs

Synopsis

SAP is the largest pure applications software vendor in the world, but gaining high-level SAP expertise can be difficult. Now a SAP insider offers the first guide to writing specific types of reports and programs within SAP using real-world ABAP Release 4 examples. This book and CD-ROM tame the massive nature of the information and integration inherent to SAP, as well as the complex ABAP programming language. "Writing SAP ABAP/4 Programs" will be invaluable to IS professionals who must maintain the SAP system once the initial consultant has moved on.A volume in the McGraw-Hill SAP Series.

Book Information

Series: Mcgraw Hill Sap Series

Customer Reviews

This is a well written book and makes easy reading, BUT it does not cover topics such as dialog programs, table controls, transactions, etc. I found this shortcoming to be a major disappointment.

A person who just starts his programming experience and it happenes to be ABAP/4 may find a well-organized way how to code some programming task. However, after initial exposure to ABAP/4 the person should run away from this book in order to get in-depth understanding of coding complex applications. The strong side of the book: consistency in conveying the material to novice programmers; the weak point: there's not a clear statement whom it's addressed for.

If you are looking to write only "Hello World" in ABAP then this is your book. But if your job is to write production code then use the SAP online documentation or Ruediger and Wolfgang's book.

This is one of the best books on ABAP. Although it does not cover all the topics, it really helps you with BDC, Dataset and it shows you some good programming practices. This should not be your first book, cause it is not for beginners. Really worth it. I wish it covered more topics.

"Writing SAP ABAP/4 Programs" is a well written textbook. I disagree with another reader's comment that it is just a "Hello World" book. Hoffman provides excellent program examples and explanations.
